New chimeric proteins containing human growth hormone fragment, used particularly for the production of human insulin ${}^{-}$

WPI: 1999-610839/52.

Gan 7;

Claim 5; Page 28; 46pp; English.

This sequence represents an N-terminal fragment of human growth hormone (hGH) which is a component of a chimeric protein (AAY42861) which also contains a human insulin precursor (AAY42859). The hGH portion of the chimeric protein acts as an intramolecular chaperone (IMC) for the

insulin precursor, enabling it to fold correctly. A cleavable peptide linker with a C-terminal Arg residue (AAY2857) enables the hdf portion of the chimeric protein to be removed after folding has taken place. Production of recombinant human insulin via an hdH-prolnsulin chimeric protein can provide human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin. The IMC sequences not only protect insulin also promote the folding of the fused insulin precursor, facilitate the solubility of the fusion protein and decrease the intermiscular. interactions among the fusion proteins, thus allowing folding of the fused insulin precursor at commercially useful high concentrations. The procedural steps of cyanogen brondle cleavage, oxidative sulphitolysis and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent resins

New chimeric proteins containing human growth hormone fragment, used particularly for the production of human insulin

Claim 13; Page 30; 46pp; English.

This sequence represents a chimeric protein, hGH-mini-proinsulin.

This chimeric protein contains an N-terminal fragment of human growth hormone (hGH) of the sequence given in AR442855, a cleavable peptide linker (AA442857), and a human insulin precursor comprising insulin A and B chains (AA442859). The hGH portion of the chimeric protein acts as an intramolecular chaperone (JMC) for the insulin precursor, enabling it to fold correctly. The cleavable peptide linker has a C-terminal Arg residue which enables the hGH portion of the chimeric protein to be removed after folding has taken place. Production

Ö of recombinant human insulin via an hGH-proinsulin chimeric protein can provide human insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a higher yield of human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a microorganism host, but also promote the folding of the fused insulin precursor, facilitate the solubility of the fusion proteins and decrease the intermolecular interactions among the fusion proteins, thus allowing folding of the fused insulin precursor at commercially useful high concentrations. The procedural steps of cyanogen bromide cleavage, oxidative sulphitolysis and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent resins. Auman; anti angiogenic; prolactin; placentil lactogen; htt.; angiogenesis; quarath harmone; htt. htt. v. capiliary endothelial cel; proliferation; placental vascularisation; pregnancy; treatment; angiogenic disease; tumbur; inhibitor; malignant; angiofibroma; atteriovenous malformation; would healing; proliferative retinopathy; nacusar degeneration; trachoma; granulation; glaucoma; ocular, uvetis; 'cture; Osler.Weber syndrome; psoriasis; fibroplasia; scleroderma; Rapus's sarcoma; vascular adhesion; quent therapy; pre-eclampsia; intrauterine growth retardation; placential dysfunction. This invention describes novel human anti-ar ogenic peptides derived from 10 to 150 consecutive amino acids selected from the N-terminal end of human placental lactogen (APL), human growth hormone (HGH), growth hormone variant (HGH-V), or human projectin. Such peptides (i) Inhibit Gaps New anti-andiogenic peptides · comprise N·terminal fragments of human placental lactogen, human growth hormone, growth hormone variant or human prolactin 0 100.0%; Score 260; DB 20; Length 107; 100.0%; Pred. Human growth hormone segment, used at the N terminal of a fusion

```
of the chimeric protein acts as an intranslecular chaperone (IMC) for the chimeric protein acts as an intranslecular chaperone (IMC) for the insulin precursor, enabling it to told correctly. The cleavable peptide linker has a C-terminal Arg residue which enables the hGH portion of the chimeric protein to be removed retained as taken place. Production of recombinant human insulin via an hGH-proinsulin chimeric protein can provide human insulin with correctly linked cystroine bridges with fewer necessary procedural steps, and core resulting in a higher yield of human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a microorganism host, but also promote the folding of the fuscal insulin precursor, facilitate the solubility of the fusion proteins, thus allowing folding of the interactions among the fusion proteins, thus allowing folding of the fusion proteins, thus allowing folding of the fusion proteins and decrease the intermolecular interactions among the fusion proteins, thus allowing folding of the fusion proteins and related purification steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbent
                                                                                                                                                                                                              ·.
protein, which contains a thrombin recognition site, and human beta nerve growth factor (beta NGF) at the C-terminal. Beta-NGF can be used to control geriatric dementia and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034, AAP91299).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a chimeric protein, which contains an N-terminal fragment of human growth hormone (hGH) of the sequence given in AAY42855, a cleavable peptide linker (AAY42857), and a human insulin precursor comprising insulin A and B chains (AAY42599). The hGH portion
                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fusion protein consisting of human growth hormone at the N-terminal end (1st region), a 3 amino acid sequence representing thrombin recognition site, and human beta nerve growth factor (beta-NGF) at the C-terminal. Beta-NGF can be used to control griatric dementia and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN%0577-8, AAP91034,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human nerve growth factor gene encoding fusion protein having cleavage site for thrombin, useful for treating geriatric
                                                                                                                                                                                                                                                                                                                                                                                             Human nerve growth factor and human growth hormone fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

The protein is a direct translation of the upstream tryptophan promoter operator lacking its attenuation requence and human beta NGF sequence. The product may be efficiently expressed from a transformed E.coli expression system.

The protein is produced by fusing DNA encoding BDF (11-) with DNA encoding BSF-2 (11.-5) and ligating the product into an expression vector See also AAR05311 and AAR05313.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                     A recombinant human nerve growth factor beta subunit-contg, protein can be produced as this fusion protein. It is purified by contacting a gel having a cation exchange gp. with the fusion protein, in the presence of urea. The purified protein is useful in a medicament for treating disorders of the nervous system, eg dementia.

                                                                                                                                                                            Recombinant human growth hormone having collagenase recognition region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The polypeptide (AAPB1226) with somatomedin-like activity and the DNA (AANB165) encoding it are claimed. A met resicual go, may be added to the N-terminal. The polypeptide acts on the bone structure of mammals, including humans, to promote bone growth. The polypeptide has high production rate and is easily extracted from bacterial culture medium and refined for use as a bone growth accelerator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to recombinant human growth hormone having collagenase recognition region.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ą,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

ALLIGNMENTS.

```
somatotropin | precursor [validated] - human
N.Alternate names: growth hormone 1; hGH-N; pituitary somatofropin
N.Contains: growth hormone 5K peptide; somatotropin 1, long form; somatotropin 1, sl
                                                                                                                                                                                                                                                           C.Species: Homo sapiens (man)

The primary Structure of monkey pituitary growth hormone. [;
Atch. Hiochem. Biophys. 245.287.291 (1986).
-!- FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete (GF.). It stimulates both the direrentiation and proliferation of myoblasts. It also stimulates among acid uptake and protein synthesis in muscic and other

Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete 16F1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in muscle and other

"Cloning and characterisation of a putative growth hormone encoding
"Cloning and characterisation of a putative growth hormone encoding
"Cloning and characterisation of a putative growth hormone encoding
Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.

FUNCTION: Plays an important role in growth control. Its major
role in stimulating body growth is to stimulate the liver and
other tissues to secrete IGF-I it simulates both the
differentiation and proliferation of myoblasts. It also stimulates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE-21265430: PubMed-11371582;
